

Versatility 2024

Journey to a Self-Protecting Network

Kelly Ahuja
CEO

Once upon a time...

Enterprise networks were safe & reliable,
a trusted place,
isolated from the dangers of the outside world.

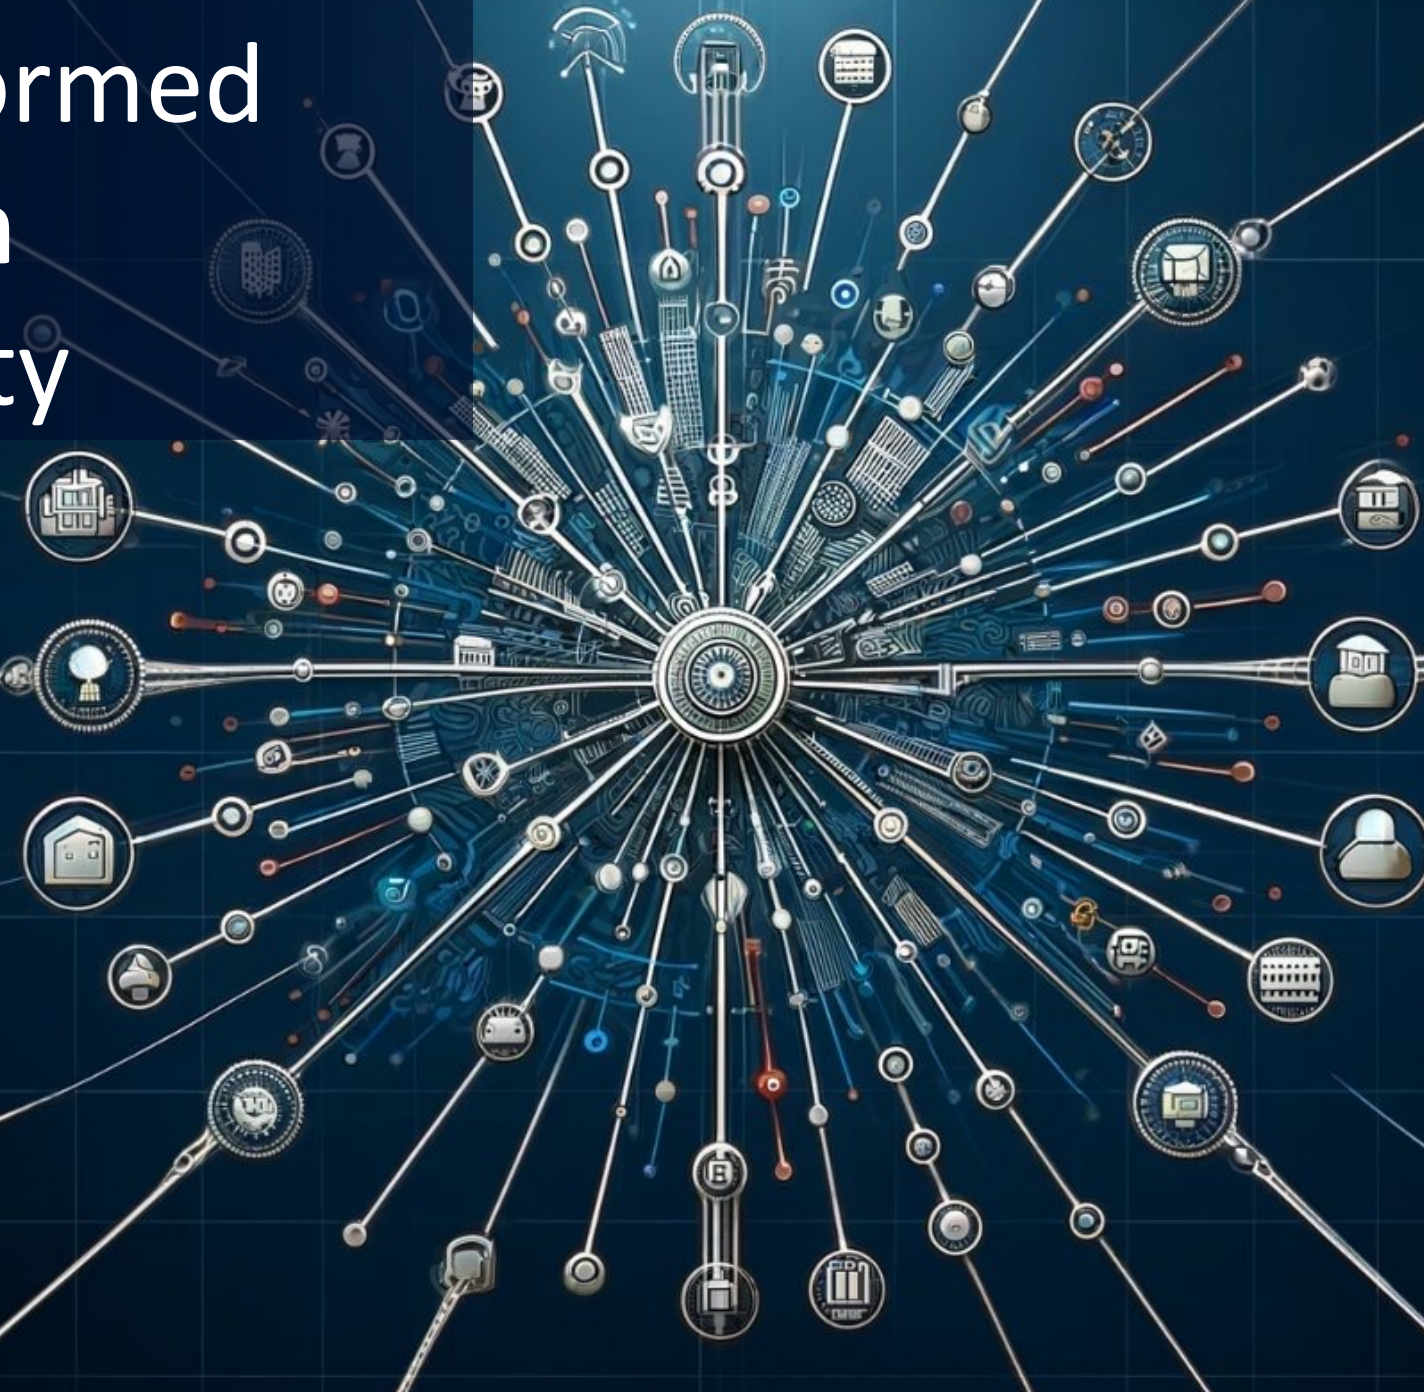

A vibrant, futuristic illustration of a digital globe. The globe is centered, showing continents and oceans, and is surrounded by a complex network of glowing lines and nodes. Various icons representing technology, communication, and industry are scattered around the globe, including smartphones, laptops, servers, and clouds. The background is a deep blue space with a bright sun or star at the top, creating a warm, golden glow. The overall scene conveys a sense of global connectivity and digital transformation.

Then digital transformation
changed the world

Our data & applications
moved to the cloud

We transformed
our **branch**
connectivity

We enabled remote & mobile
user connectivity at scale

The network
edge is millions
of devices

WE ENABLED
DIGITAL
TRANSFORMATION
FOR OUR ORGANIZATIONS

So we're done, right?

“Move fast
without
breaking things.”

We split our
infrastructure into islands

**DIGITALLY TRANSFORMED
BUT LACK AGILITY**

The image features a central, dark, stone-like castle with multiple towers and battlements, set upon a dark, textured surface resembling a circuit board or a city map. The castle is illuminated with a bright blue glow, particularly from its central tower and the tops of its battlements. Numerous glowing blue lines radiate from the castle, connecting to various floating icons and digital screens. These icons include padlocks, shields, a Wi-Fi symbol, a heart, a cloud, and a globe. In the background, several large, semi-transparent digital screens display various data visualizations, including a large circular gauge with a padlock in the center, and other smaller screens showing charts and data. The overall color palette is dominated by dark blues, greys, and bright, glowing blues, creating a high-tech, cybernetic atmosphere.

TONS OF SECURITY

BUT ZERO TRUST

HIGH CAPACITY

BUT POOR PERFORMANCE

MASSIVE DATA

BUT LIMITED INSIGHT

**COSTS ARE
HIGHER THAN EVER**

What do we need?

Radical
simplification

TOTAL AUTOMATION

SASE was a
good start...

***Simplify how you protect
every user, device, site
everywhere and connect to
data and applications
anywhere, anytime.***

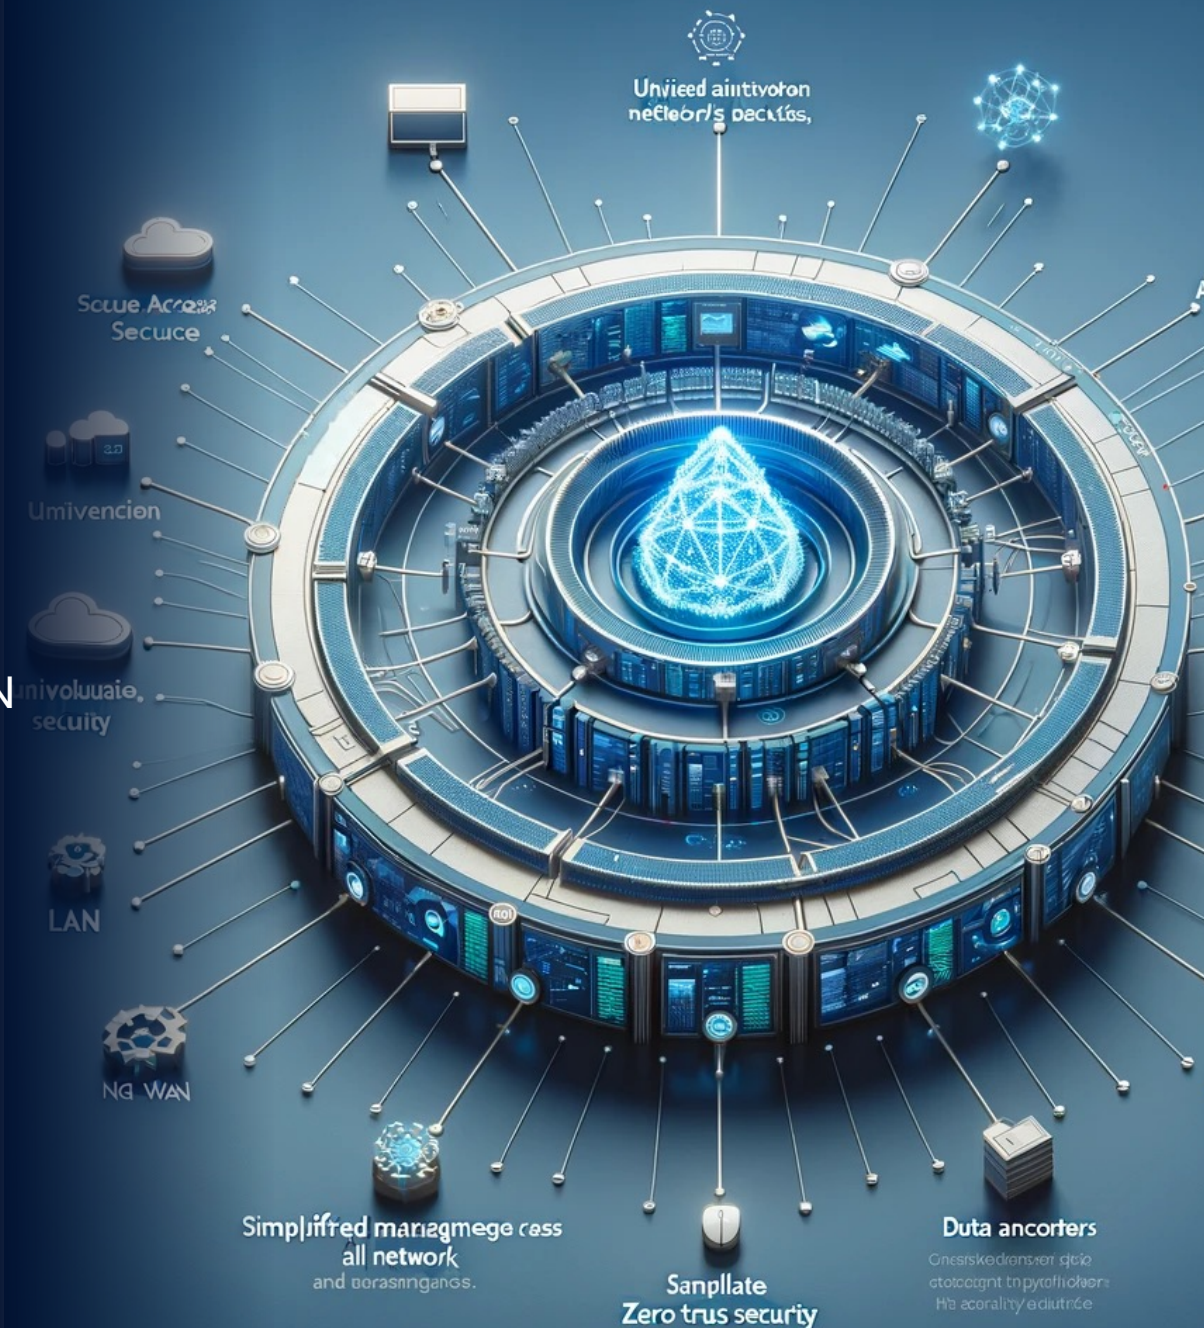

Protect . Connect. Simplify

VersaONE

Universal SASE Platform

- Anywhere, anytime access to anything
 - All users, employees, third parties
 - All devices, managed, and unmanaged, IT and OT/ICS
 - All offices, branches, data centers and edge locations
 - All networks – Wired/Wireless LAN, Wireline/Cellular WAN
- Security Built-in
 - Zero Trust baked in
 - Flexible, distributed enforcement
 - Continuous risk assessment and threat detection
 - Consistent policy enforcement everywhere
- Powered by AI

Create Your Self-Protecting Network
